INVESTMENT APPROACH

We use a bottom-up approach that seeks to identify companies with outstanding long-term growth potential. We look for companies with:

- Strong financials
- A sustainable competitive advantage
- Industry-best management teams
- Earnings growth greater than the relevant sector or industry

Primarily invests in companies located in emerging markets with market caps of less than \$5 billion at the time of purchase

Approximately 50-80 positions

Est. 5-year EPS Growth %: Estimated percentage increase in earnings per share (EPS) per year of the funds holdings over the next 5 years. Returns are not guaranteed and may be higher or lower. Source: Wasatch and FactSet. **P/E (Forward):** Sum of stock prices of the fund's holdings divided by the aggregate earnings per share of those holdings for the next 12 months calculated as a weighted harmonic average. **Weighted Average Market Cap:** Average market capitalization of companies held by the fund, weighted by their percentage of fund net assets. **Portfolio Turnover:** A measure of trading activity in a fund's portfolio over the past 12 months expressed as a percentage of the fund's average total assets. **Alpha** measures a fund's risk/reward potential. A positive alpha means the fund outperformed the index. A negative alpha means the fund underperformed the index. **Beta** measures a fund's risk in relation to the market. A beta of 0.8 means the fund's total return is likely to move up or down 80% of the market change; 1.25 means total return is likely to move up or down 25% more than the market. **R-Squared** measures (from 0 to 1.0) how closely a fund's movements are correlated with movements of its benchmark. An R-squared of 1.0 would mean that the fund's movements are completely correlated with the movements of its benchmark. **Active Share** measures the difference between portfolio holdings and the benchmark. It is the sum of the absolute values of the different weightings of each holding in the fund versus each holding in the benchmark, divided by 2. **Standard Deviation** measures the degree to which a fund's performance has varied from its average performance over a particular time period. The greater the standard deviation, the greater a fund's volatility (risk). **Upside Capture** explains how well a fund performs in time periods where the benchmark's returns are greater than zero. **Downside Capture** explains how well a fund performs in time periods where the benchmark's returns are less than zero.
