

Wasatch Small Cap Growth Strategy

SEPTEMBER 30, 2020

Recent Volatility Doesn't Change Our Optimism For Technology Companies

OVERVIEW

During the third quarter of 2020, U.S. small-cap stocks added to their second-quarter gains—albeit at a slower pace. For the three months ended September 30, the benchmark Russell 2000® Growth Index increased 7.16% while the Russell 2000 Index rose 4.93%. Outperforming both indexes, the Wasatch Small Cap Growth strategy produced a double-digit gain.

U.S. markets showed strong returns even though the coronavirus pandemic continued to impact the economy. While companies have been fairly resilient, no reasonable analyst would minimize the effects on stock prices from support by government fiscal initiatives and Federal Reserve monetary policies. Beyond outright securities purchases and lending backstops, the Fed recently announced its plans to keep interest rates extremely low for at least the next few years and to promote higher employment and inflation. In addition, the Fed stepped outside its monetary mandate by publicly encouraging Congress to do even more on the fiscal front to assist individuals and businesses facing continued hardship.

Regarding sectors, information technology (IT) and health care were the strategy's largest sources of outperformance relative to the benchmark during the third quarter. In both sectors, favorable stock selection was the key factor. As for the industrials sector, our stocks lagged—which created a drag on the strategy's relative return. The remaining sectors didn't have any major effects on performance against the benchmark.

THE WASATCH PERSPECTIVE ON TECHNOLOGY

Because IT is a large weighting in the strategy—and because our tech and tech-related returns have been so robust for extended periods—we’re offering our perspective on the sector and the types of names we hold.

Notwithstanding a temporary pullback during September, IT stocks have continued their strong performance as many tech companies have actually benefited from the pandemic. Tech companies have been the leaders in replacing face-to-face activities with online, virtual alternatives. Additionally, many technology-enabled services have become increasingly important in delivering goods and services during the pandemic. What’s more, we don’t think these trends will necessarily reverse after the pandemic ends because people have become used to new ways of living and working.

While the Small Cap Growth strategy is significantly overweighted in IT relative to the benchmark, we’re very particular about the specific tech and tech-related names we own. First, we invest in what we consider high-quality companies with excellent management teams, innovative business models and expanding markets. Second, we tend to avoid really expensive companies that in our opinion are selling at excessive price-to-sales ratios. This means the strategy may lag some more aggressive portfolios during exceptionally strong upward moves in the market but may also hold up better during major downdrafts. Third, we try to own a balance of some especially fast growers that have been firing on all cylinders and some more moderately priced companies.

The reason we own a balance of companies is that the especially fast growers may be well-positioned for the current environment but may be trading at somewhat expensive valuations. And the more moderately priced companies may be having some challenges at the present time but may be

poised to see accelerating growth if the environment changes. By owning a balance, we’re positioned for the possibilities of a new environment and a general reset in valuations.

To understand why we’re so optimistic regarding growth-oriented tech companies, please refer to the figure below. The figure shows the year-over-year change in information-technology (IT) spending—which is broken down by cloud and Software-as-a-Service (SaaS) spending, on-premises/legacy software spending and total spending.

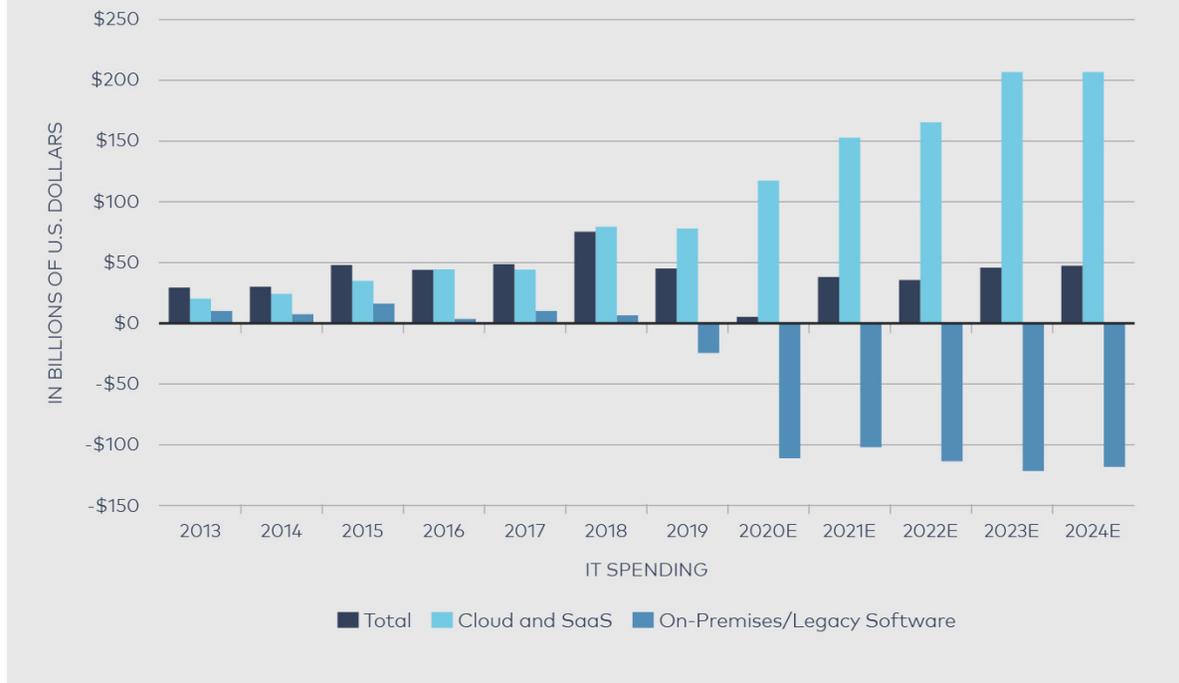

What you can see from the figure is that total spending has been increasing each year. But cloud and SaaS spending has been increasing at a phenomenal rate, while on-premises/legacy software spending has started to fall dramatically. The coronavirus pandemic and the recession have only accelerated these trends because fewer people are working in the office and companies are looking to save money. The cloud and SaaS are major enablers of remote work and alternative forms of communication and data delivery. Additionally, cloud and SaaS applications should be more cost-effective over the long term.

Another way to think about the development of technology is to visualize a growth curve. Imagine the shape of a successful company’s growth curve, which over time goes up and to the right. Now imagine the growth curve is shifted to the left. This means the company’s growth comes earlier than would otherwise have been the case. And every point on the curve is higher than it would have been. For many of the companies we own, we think the pandemic has in fact caused a leftward shift in the growth curve.

Now let’s consider a more concrete example. Suppose the pandemic has already caused a business meeting to take place virtually via a technologically advanced application delivered securely over the internet. The fees to enable this

Year-Over-Year Change in Information-Technology (IT) Spending

CLOUD AND SOFTWARE-AS-A-SERVICE (SaaS) TECHNOLOGY SHOULD CONTINUE TO TAKE MARKET SHARE

Sources: IDC, Bernstein and Wasatch estimates. As of September 30, 2020. Year-over-year change in IT spending is estimated for years 2020 through 2024.

meeting have already gone to the tech company. And the lost fees that may have otherwise gone to airlines, hotels and restaurants will never be recouped. Moreover, after the pandemic ends, people will probably continue to embrace their newfound tech-savvy way of doing business. Beyond the pandemic, there are numerous other reasons why we think many tech and tech-related companies are still very early in their development.

Does this mean we should ignore the exorbitant valuations of some IT stocks? Absolutely not. That's why, as described above, we seek to balance our higher-priced names with more moderately priced holdings. And we keep overall valuations in check by

selling positions that move beyond our comfort zone.

For instance, we recently liquidated our shares of **DocuSign, Inc. (DOCU)**, which offers e-signature software that enables businesses and individuals to digitally prepare and execute agreements. Utilization of the software spiked during the pandemic and the stock was an excellent performer, propelling the company's market capitalization to over \$40 billion. While we still like the company, the valuation set a higher bar for the future. With the proceeds of our DocuSign sale, we rotated into what we viewed as more reasonably priced names.

Going forward, it's certainly possible that tech companies may have short-term trouble exceeding their recent success and that other sectors may outpace IT for a period of time. It's also possible that value may temporarily outshine growth. But we don't attempt to navigate such cycles in the market. Instead, we remain focused on the fundamentals: management quality, business-model viability, scope for increased market share and market expansion, returns on capital and balance-sheet health.

Over the long-term, we believe that market cycles will fade from memory and that growth in sales and earnings will drive the performance of stocks. We also think that in our attempt to capture attractive growth in sales and earnings, tech and tech-related companies will comprise a significant portion of the strategy's holdings. For the most part, the companies we favor are generating significant amounts of cash and are in no danger of having to sell equity or incur debt on unfavorable terms. These companies also tend to show rising trends in gross profit.

TECH AND TECH-RELATED COMPANIES WE LIKE

One of the tech companies we like is **Five9, Inc. (FIVN)**, which provides contact-center software that's managed and hosted from the cloud. The company offers real-time and historical reporting, quality monitoring, and workforce and customer-relationship-management integrations. The stock has benefited from the superiority of cloud-based software over on-premises/legacy software, which has become especially evident during the coronavirus pandemic. Five9's robust software has enabled customers to quickly shift employees from large contact centers to work-from-home environments with limited disruption.

On a longer-term basis, Five9 has a few competitive advantages that make it the dominant growth company in its industry. First, Five9 offers

compelling products that address mission-critical customer needs, and the company has been leveraging these products with high research-and-development spending. This has resulted in technological leadership, which has created a barrier to entry that may prevent competitors from gaining a foothold. Second, the company has been enhancing its products for reliability, functionality and scalability at the enterprise level—thereby opening new revenue opportunities. Third, in our estimation, Five9's leadership team has talent and depth at the home office and at the regional levels, and the company has created a culture that attracts and retains best-in-class personnel.

Although Five9 has been extremely successful during the pandemic and the stock price reflects this success, we believe the company and the stock still have considerable upside potential. The market is large and expanding, and Five9's competitive advantages are becoming stronger. Customers, for their part, have every incentive to maintain a long-term, mutually beneficial relationship with Five9 because they receive cost-effective prices, almost zero downtime, easy integration with other software platforms, and reporting systems that help manage full-time and seasonal staff across multiple time zones and geographies.

Among tech-related companies that aren't classified as IT businesses, we favor **Kornit Digital Ltd. (KRNT)**—an Israeli-American company that appears in the industrials sector. Kornit produces proprietary digital-printing equipment for the textile industry. Shares of the company rose after the CEO said he expected sales growth to reaccelerate as governments lift coronavirus-related restrictions on businesses. The CEO also noted that disruptions tied to the virus had hastened the shift to e-commerce and exposed inherent supply-chain challenges faced by traditional retail. We think Kornit is positioned to benefit as the growing need for flexible inventory

management drives increased adoption of on-demand digital-production solutions.

Although Kornit operates in an old-line manufacturing segment, the company is benefiting from the implementation of a high-tech web-based system that simplifies textile printing. Kornit manages the design and manufacturing of the printers, but the company's customers—including Amazon.com and Nike—operate the printers to meet specific needs for the quick turnaround of both large and small jobs. Even before the pandemic, Kornit had an annualized revenue growth rate of 18% for the three years ended in 2019. Currently, we believe the company and the market are still very early in their development.

DETAILS OF THE QUARTER

Falling mortgage interest rates have led to tailwinds in some industries. For example, there's been a spike in U.S. home sales and new-home construction. These trends have been benefiting several of our holdings, including **LGI Homes, Inc. (LGIH)** and **Floor & Decor Holdings, Inc. (FND)**. LGI designs and builds homes in about 20 states. The company has experienced impressive and consistent yearly growth since its 2013 initial public offering and now holds approximately 44,000 lots. LGI had a strong balance sheet coming into the pandemic, which we believe will allow the company to continue to take advantage of the opportunities presented by the surge in demand. Floor & Decor sells tile, wood, laminate and natural-stone flooring—as well as related decorations and accessories. We think the number of stores may increase by about 20% in 2021 and upcoming same-store sales growth could exceed analysts' expectations. Both companies were among the top contributors to strategy performance for the quarter.

The health-care sector—including **Ensign Group, Inc. (ENSG)** and **Pennant Group, Inc. (PNTG)**—produced several companies that were top

contributors to the strategy's performance.

Pennant was previously a part of Ensign before spinning off into its own operation. Both companies offer senior-care services, with Ensign specializing in assisted-living communities and Pennant focusing on in-home care, including rehabilitative and hospice care. In addition to the secular trend favoring health-care stocks broadly, both companies are benefiting from the Department of Health and Human Services' Provider Relief Fund—which is intended to assist health-care facilities hardest hit by Covid-19.

The largest detractor from strategy performance for the third quarter was **Monro, Inc. (MNRO)**, a leading chain of automotive-repair shops with more than 1,280 locations spread across 32 states. The company has certainly been impacted in the short term by stay-at-home orders and decreased travel. Also, Monro's CEO recently resigned to become the CEO of a larger company. Board Chairman Robert Mellor has been appointed interim CEO, and the search for a successor has been initiated. We spoke to Mr. Mellor recently and feel comfortable that a sound, long-term business plan remains in place for the company. Given an already-impressive footprint, we believe Monro still has significant headroom for growth over the next few years despite the company's short-term challenges.

Another large detractor from strategy performance was **Inovio Pharmaceuticals, Inc. (INO)**. A biotechnology company, Inovio is developing a Covid-19 vaccine candidate, INO-4800. Following an upswell of optimism from March through June, the company's stock price headed lower during the third quarter amid worries that Inovio may be falling behind its competitors in the race to develop a vaccine for the disease. Concerns grew in late September after the company disclosed in a press release that the U.S. Food and Drug Administration (FDA) had placed a partial hold on a combined Phase 2/3 clinical trial of INO-4800 that Inovio had

planned to initiate by the end of the month. According to the company, the FDA had additional questions, including about the vaccine-delivery device to be used in the study.

On the positive side, Inovio stated that the FDA's partial hold didn't result from any adverse events in its ongoing expanded Phase 1 trial. Nor does the hold affect the advancement of the company's other pipeline assets. Should INO-4800 eventually gain approval, we think its advantages—especially with respect to safety, storage and administration—would position it as a potentially valuable weapon in the vaccine arsenal that will be needed to quell the pandemic. Inovio's DNA medicines currently in development for various cancers and pre-cancers also offer meaningful upside potential in our analysis.

HealthEquity, Inc. (HQQ), which also declined for the quarter, provides technology-enabled services platforms that allow consumers to make health-care saving and spending decisions. The company's platform gives consumers access to their tax-advantaged health-care-savings accounts, compare treatment options, pay medical bills, earn wellness incentives, and receive personalized benefit and clinical information. We believe the company's acquisition of WageWorks caused some investors to take a wait-and-see attitude toward HealthEquity's stock. But we think the acquisition should be a positive long-term growth driver for HealthEquity despite some associated seasonal risks.

OUTLOOK AND POSITIONING

With the success of growth-oriented tech and tech-related stocks over the past several years,

many investors are questioning whether there will be a market rotation away from growth stocks and toward value stocks—which are typically in more basic industries like oil drilling, mining and banking. For our part, we don't think it's possible to successfully navigate growth and value cycles. Instead, we prefer to stay invested in growth names that meet our strict quality standards.

More broadly, with the Fed committed to near-zero interest rates (and therefore a low cost of capital) for years on end, cash-generative growth companies should be particularly well-positioned to produce attractive returns on invested capital—especially if the companies' total addressable markets are very large and expanding. Additionally, from a discounted-cash-flow perspective, low interest rates should favor companies that defer profits today in order to achieve large, recurring profits well into the future.

In closing, we'd like to emphasize that our expertise isn't in trying to predict the intricacies of politics, vaccine development, the "reopening trade" or growth versus value cycles. We leave attempts at those predictions to others. For our part, we prefer to stay immersed in analyzing company fundamentals, activities we think actually give us an edge in the very competitive field of investments.

Thank you for the opportunity to manage your assets.

Sincerely,

JB Taylor, Ken Korngiebel and Ryan Snow
